### 12.2. PERSISTENCE AND DEGRADABILITY:

#### ASSESSMENT BIODEGRADATION AND ELIMINATION:

Readily biodegradable (acc. to OECD criteria). The surfactants contained in this preparation comply with the biodegradability criteria as laid down in Regulation (EC) No.648/2004 on detergents. Data to support this assertion are held at the disposal of the competent authorities of the Member States and will be made available to them, at their direct request or at the request of a detergent manufacturer.

| Ingredient                   | Biodegradability  | Days (OECD Guideline 301 B; 301 D, 301 F, 301 E and 302 B) |
|------------------------------|---|--|
| Sodium Laureth Sulfate       | >60 %   | 28 (302 B)   |
| Dodecylbenzene Sulfonic Acid | 94 %  | 28 (301 B)   |
| Cocamide DEA                 | 92.5 %  | 28 (301 B)   |
| Sodium Hydroxide             | Not biodegradable (Biodegradability term pertains to an organic material capable of decomposition as a result of attack by microorganisms). |  |

## 12.3. BIOACCUMULATIVE POTENTIAL

Not expected to bioaccumulate

| Ingredient                   | BCF          | Note   |
|------------------------------|--------------|--|
| Sodium Laureth Sulfate       | <b>70.79</b> | A very low potential for bioaccumulation   |
| Dodecylbenzene Sulfonic Acid | <b>87</b>    | A very low potential for bioaccumulation is expected and is decreased by environmental processes such as biodegradation and absorption, which reduce aquatic concentrations.   |
| Cocamide DEA                 | <b>29</b>    | Overall considering either the individual BCF predictions for the constituents or the weighted average values, the test substance is expected to have a low bioaccumulation potential.   |
| Laureth-4                    | <b>12.7</b>  | The studies provide clear evidence that alcohol ethoxylates are rapidly eliminated and metabolised. Although the fate of metabolites of AE has not been thoroughly studied, rapid biodegradation of alcohol ethoxylates in the aquatic environment is considered to be a mitigating aspect, since the rate of biodegradation of alcohol ethoxylates are significantly faster than the uptake rates of bioaccumulation. |
| Cocamidopropyl Betaine       | <b>71</b>    | A very low potential for bioaccumulation   |
| Propane-1,2-diol             | <b>0.09</b>  | Calculated   |

## 12.4. MOBILITY IN SOIL:

Soluble in water. The product is predicted to have high mobility in soil.
